

PRESENTATION AND WORKSHOP MENU
FOR JON BIEMER'S 2024 BOOK TOUR

Our Journey to Sustainability shares 150 stories of people taking care of the planet through personal action, both modest and extraordinary. This includes 25 nuggets of sustainable wisdom. From the perspective of 40+ year's sustainability-related experience, I offer these presentations.

"This is what it takes." The question that motivated *Our Journey to Sustainability* is "What motivates people to act on behalf of the earth and her people." I observed that caring, catalysts and collaboration are essential.

"Bring Spirit to sustainability." There was a time when spirituality, religion and environmentalism were kept separate. No more. Vision quests. Long walks. Honoring creation. Church collections. Collective action. All of this matters!

"Sustainability wherever you are." Libraries. Trails. Cell phone repair shops. Extraordinary initiatives in small towns. We can all make a difference.

"Sustainable initiatives in Indigenous Country." I included the work of Indigenous people in the stories have collected. Their history, cultures and current realities speak to what works.

"The ark of a Collective Handprint." I offer inspiring stories mostly from my previous book is *Our Environmental Handprint*. We have already revived rivers, phased out chlorofluorocarbons, and passed plastic bag bans.

Workshops I share include:

"Putting the three C's of sustainability into action." Explore how we can help others *care* about the environment, provide *catalysts* to create sustainability, and *collaborate* to help others achieve their sustainable visions.

"Bring spirit to Sustainability." Claim your inner power to create sustainability. Discover spirit in how you communicate. Connect values and beliefs with actions.

"Your Environmental Handprints." On outlines of our handprints we write down thing we have done for the environment and things intend to do for the environment. This is a fun interactive activity for all ages.

"Your climate action plan." As an Organizational Development consultant, I can facilitate a goal-setting meeting relating to sustainability and climate action for your organization.

"Climate action lessons learned." For those groups that have already embarked on a climate action plan... Let's be a learning organization. How is it going? What needs redirecting?
